

STATEMENT FROM HOWARD SCHER, MD

CHIEF, GENITOURINARY SERVICE

MEMORIAL SLOAN-KETTERING CANCER CENTER

Senator Dodd has been diagnosed with prostate cancer. It was found in an early stage and the prognosis for his full recovery is excellent. While there are many treatment options available for people with prostate cancer, after consultation with his physicians the recommended course of treatment for Senator Dodd is surgery. He will have the surgery at Memorial Sloan-Kettering Cancer Center. He is expected to return to full activity within a few weeks of the surgery.
